	Female	**PLT vs WT**	**Pound vs WT**	**t>1 vs t1**			
				WT	**PLT**	**Pound**	
CD19posb220			Down at t3,t4	Down at t2, t5			
CD11cpos	PLT: Up at t3	Up at t4, t5	Down at t3	Up at 3, down at 4		Down at t2,t4	
CD11bpos			UP at t4,t5		Up at t3,t4	Up at t4	
mMDCSC a	Up at t3	Up at t1	Up at t1 Down at t3	Up at t4,t5		Down at t3	
mMDCSC b	Up at t3 all types		Up at t1,t4,t5	Up at t3,t4		Down at t3	
gMDCSC a	PLT down at t3		Up at t3, t4,t5		Up at t2, t3	Up at t3	
gMDCSC b			Up at t3, t4,t5		Up at t2, t3,t4	Up at t4	
intMDCSs a	WT,Pound: Up at t4,t5		Down at t3,t4,t5	Down at t2	Down at t2,t3	Down at t2,t3	
intMDCSs b	PLT up at t3,t4		Down at t34			Down at t2,t3	

Time index from (1,2,3,4,5) correspond to (0,3,10,17,24)
I have left out day 31 altogether.

For example: CD11cpos:

- PLT female mice have significantly higher count at t3, i.e at day 10.
- PLT have higher counts at t4 and t5 (compared to WT)
- Pound have lower counts at t3 (compared to WT)
- WT counts are higher at t3 (compared to t1) and lower at t4 (compared to t1)
- Pound counts are lower at t2 and t4 (compared to t1)
